

WorldDoc and Microsoft HealthVault

Improved Consumer Care Management Through Synchronization

WorldDoc is a leading provider of consumer care management systems to health plans, third party administrators (TPAs) and employers. WorldDoc's fully integrated product suite empowers individuals to make better health care decisions leading to improved health and decreased healthcare costs.

WorldDoc 24/7™ collects, analyzes and integrates a user's medical, prescription and personal health data to provide a comprehensive care management solution that includes personalized medical goals, care gap identification and relevant, actionable communication. Integration with HealthVault further enhances the power of WorldDoc through an even more up-to-date and complete picture of a population's health.

HealthVault is a free, web-based platform designed to put individuals in control of their health data. It helps them collect, store and share health information with family members and participating healthcare providers. The accessibility and portability of the health information stored in HealthVault has opened new possibilities for improved and personalized health management.

- Synchronizing data between HealthVault and WorldDoc gives users the added value of being able to easily access and manage their health data from multiple sources.
- WorldDoc members can integrate data from HealthVault compatible devices and other health information into WorldDoc's system which then provides up to date, targeted recommendations to the member.
- Control of what information is stored in the HealthVault record and who is allowed access to that information is determined by the user.

The relevance and quality of the personalized WorldDoc information is an integral factor in ensuring member engagement, making more informed healthcare decisions, reducing costs and improving health outcomes. WorldDoc's complete integration of a patient's health information provides a more personalized solution to total consumer care management.
